First-time Usage

1 Battery charging and maintenance

When using in the first time, please charge the battery until it is fully charged. Charging can be performed with just the power adapter. For the first two times, charge the device for eight hours. Subsequently, simply charge the device until the battery indicator shows that the device is fully charged.

The device uses a built-in polymer battery. The appropriate adapter must be used in charging the device. While charging, the battery icon will move in a scrolling motion. When charging is complete, the battery icon will stop scrolling. To prolong the lifetime of the device, it is recommended to use the batteries.

Note: If the device will be left unused for long periods of time, charge the phone once a month and allow the power to drain to prevent damage resulting from the battery dying. When the device automatically turns off due to low battery power, connect it to the power adapter. The screen will notify you that the device cannot be powered on until it has been sufficiently charged. The device will require more time to charge when it is charging while in use. We recommend charging the device when it is not in use.

Note: Do not place the battery in the microwave or a pressure tank; do not use the battery in conjunction with other chemical batteries (such as dry cells), batteries with different capacities, or batteries of different brands. If the battery begins to emit an odor, heats up, changes in color, changes in shape, or exhibits any other abnormal signs during charging or storage, immediately remove the battery from the device and stop charging. If the battery is no longer charging, please disconnect it from the power adapter. The battery must be placed out of the reach of children. If the battery is accidentally swallowed, go to the hospital immediately. If the battery begins to leak or emits a gas-like smell, quickly remove it from the presence of any fire to prevent the battery from catching on fire. If the battery is leaking and electrolyte liquid comes into contact with the eyes, do not rub the eyes. Flush the eyes with clean water and go to the hospital immediately to prevent long-term damage. Using an incompatible replacement battery model may result in risk of explosion. Batteries should be disposed of at authorized battery recycling centers.
